

Tactical Monitor Stand

A Rugged, Portable Solution for LCD Monitors in Tactical Field Use

The Army All Source Analysis System (ASAS) program selected a commercial LCD computer monitor for its tactical field use. The monitor comes in various sizes; ASAS is currently using the 19 and 20 inch models. The accompanying commercial monitor stand is adequate for office environments, but does not hold up well under field conditions. Its large, fixed feet make it difficult to stow, and its auto-positioning spring would be destroyed during rough terrain transport.

EWA Government Systems Inc. designed a rugged monitor stand that allows for tilt adjustment and laptop storage under the stand during operation. In addition, the screen folds into the base for secure storage. The stand comes with a carrying handle and an optional quick wall mount accessory. The whole package slides easily into a padded carrying bag which provides ample padding even during rough transport, eliminating the need for padded storage bins.
